GENERAL INFORMATION

On behalf of the Organizing Committee of

9th International Symposium on Antimicrobial Peptides AMP 2026

Besançon, November 18-20, 2026

Organized by the AMP Working Group of the Société Française de Microbiologie (SFM)

The continuous and ever-increasing resistance to antibiotics represents a major challenge to global public health. In this context, there is an urgent need to identify novel potential antimicrobials, to dissect their molecular mechanism(s) of action, and to characterize their function in the context of complex immune responses. Antimicrobial peptides represent a class of antibiotic molecules that display targeted activity against microorganisms, which are produced by living organisms as diverse as bacteria, fungi, plants, insects and vertebrates, and which can be as well artificially designed and synthesized.

AMP2026 will bring together the world's leading experts in the field to discuss the most recent research advances on: a) the discovery, biosynthesis pathways and bioengineering of novel antimicrobial peptides, b) the mechanisms of antimicrobial activities and bacterial resistance, c) immune modulation by antimicrobial peptides, d) the interplay between antimicrobial peptides & microbiota, and e) antimicrobial peptides in the One Health context and applications. The 9th International Symposium on Antimicrobial Peptides is supported by the French Society of Microbiology, by Marie & Louis Pasteur University, and by University Hospital of Besançon which will participate to the organization and social activities of the Symposium.
